Birtwick Park

Specialist Learning Centre

Completed September 2012

Birtwick Park is a modern purpose-built specialist education learning centre, built using highly sustainable and recyclable materials, including FSC sourced timber.

The project illustrates high quality modern sustainable design and craftsmanship, blending superbly with the natural surroundings within the grounds of a Grade Two listed building. Natural light and countryside views are maximised through careful design and placement of windows and doors to create a therapeutic learning environment. A green roof could also be accommodated.

Predominately built off-site using SIP panels, the 400m² building was completed on-site within just 16 weeks.
